Comments:

- The document under this review is part of the Design Optimization Proposal Procedure.
- As the Diversion Tunnel is considered as a hydraulic tunnel with pressurized flow conditions with high flow velocities, reinforced concrete lining shall be considered all over the tunnel section, also in the roof, independent of rock class. This has to be considered in the excavation drawings as well.
- The design of the concrete pug is missing. Design of the concrete plug/ shape has to be considered in the excavation outline of the Diversion Tunnel.

Further OE´s comments are indicated in red in the Annex.
